

September 1, 2015

To Whom It May Concern:

It is a distinct pleasure to recommend to you one of our most valuable software engineers. In my capacity as CEO and former Technical Director at Real Games, I have worked closely with Diogo Vasconcelos from 2012 – 2015.

Diogo is an outstanding software engineer who continuously exceeded the expectations set for his position. Diogo has demonstrated excellent programming skills and an insatiable zeal to learn new technical skills. During the past two years, Diogo occupied the position of lead software engineer and was responsible for the core development of our products. His main responsibility was the modelling of software using class diagrams and design patterns and translating those models into programming code. He was one of our most valuable professionals and will certainly be a great addition to any team.

I had the pleasure of being the advisor of Diogo during his master thesis - 2012. As a student, Diogo easily evolved from an entry level programmer into a focused, self-assured scholar capable of mastering many advanced concepts only found on senior software engineers. Diogo graduated with distinction with the best grade I ever gave a student.

Finally, Diogo also interacts well with his colleagues. He has demonstrated great sensibility to organizational needs as well as assuming a leadership position when needed. He is very perceptive and committed to every task he takes on.

Sincerely,

Bruno Vigário

CEO – Real Games Lda.
